

Metastatic Bone Pain from Cancer Relieved With P.N.T. Brain Reflex Treatment™, On the Spot!

Patient goes from Hell to Heaven!

"I was stunned!" says Pain Management M.D.

"I had a patient who had a dysrhythmia. Her heart rate dropped right away from 130 to 60 when I treated some of the P.N.T Brain Reflexes™.

1) "I saw another female patient with lung cancer. She had severe pain from bone metastases to the spine. She had a spondylolisthesis that went from 8 mm to 15 mm.

"She had screws in her spine from surgery. Her metastases were so severe that the screws were falling out because the spine was eaten away by cancer. One of the screws was broken.

"She had such severe pain you could barely touch her. She could hardly move. I did the Brain Reflexes™ on her. Immediately she could move much better. Her pain was GONE! She had a stunning response! That night she was dramatically better. She went from hell to heaven by using the Brain Reflexes™. I was stunned.

"She went home that afternoon- after 4 days in the hospital.

Reflex Sympathetic Dystrophy (RSD) Pain GONE in 5 seconds with P.N.T. Brain Reflexes™!

Useless, shriveled hand straightens out on the spot!

2) "I had a patient with a useless, claw hand (a dystrophic hand)- her hand was shriveled and ice cold, and extremely painful. She had severe back pain. She also had a severe headache. She had Complex Regional Pain Syndrome (CRPS -1). (the disorder formerly known as Reflex Sympathetic Dystrophy.)

"She'd had a 3-4 level surgical decompression in both her cervical AND lumbar spines, with instrumentation.

"I did the P.N.T. Brain Reflexes™ and within 5 seconds her hand straightened out of the claw position, and it warmed up. You could see the veins and

arteries expanding and blood coming back to her hand. Her pain disappeared in seconds. You should've seen her smile. She had so much relief from pain, she fell asleep in her wheel chair (after the Brain Reflex™ treatment).

3) "I had another lady with a very large subarachnoid cyst, from L3-S1. She had severe post surgical lumbar pain. She'd had surgical decompressions in the cervical and lumbar areas. I did the Brain Reflex treatment™ and it stopped the pain!

4) "I had a patient with severe C7-T1 pain in a nursing home. I came in to see another patient and she was howling in pain. One of the Brain Reflexes™ stopped the pain.

5) "After the class I had a patient in hospital overnight who was almost immobile with severe back pain. The L4 reflex was absent. He couldn't get out of bed, he was in diapers. I did the Brain Reflexes™ and he had a stunning response. The patient sat up, and could then walk with no pain. The neurologist was amazed. The patient is now fine. He was discharged.

6) "I saw a nurse with severe back pain for a long time; she was in antalgic position. She's had epidurals, etc. After the Brain Reflex™ treatment, she was pain free- she ran down the hall like a teenager. The Brain Reflexes have been incredible for back pain, even on a patient on a lot of medication. I'm amazed! I've been amazed before (with P.N.T.), but not like this.

"The Emotional Brain Reflexes™ are dynamite! A family member has a high stress job. After treatment she was much better, and slept through the night."

"Practically every patient I've had with jaw pain, including several patients with bone metastases in their jaw (from cancer), has had the pain disappear in one or 2 treatments. I've treated them with Manual Spinal Nerve Blocks. They get pain relief from 1 or 2 treatments, and it lasts for months."

David Walsh, M.D. Mobile, AI. Board Certified, Anesthesiology. Board Certified, Pain Management. Board Certified, Pain Medicine. Board Certified, Medical Acupuncture.

As you know, pain from cancer spread to the bone is among the worst pain a person can suffer from. Reflex Sympathetic Dystrophy (R.S.D.), AKA Chronic Regional Pain Syndrome (C.R.P.S.), is also one of the most painful conditions a human can have. I often get questions about whether any of the P.N.T. techniques can help this type of pain.

Dr. David Walsh, M.D. has treated a number of such patients successfully. I have absolutely no idea what percentage of patients will respond to the Brain Reflexes™. And I don't know how many treatments the patient would need for lasting results.

But his report was so extraordinary I called him back twice to go over it, to make certain I wrote it down correctly. Obviously the cancer itself is not affected by the techniques, only the pain.

These astonishing case reports, along with hundreds of others, illustrate that the P.N.T. family of techniques don't "just" get rid of pain but often restore function in a way that seems impossible. Certainly there would be no other way that I know of to easily get these results.

In the patient with R.S.D. and the dystrophic hand, I assume the technique must have normalized the nerve supply to the blood vessels in her hand, causing immediate, massive improvement in circulation, almost like filling up a balloon with fluid! Again, I have no idea if this would work with other patients- but certainly it's worth reporting.

(Many of us don't treat patients with this much pain. If even such severely ill patients get so much relief with the Brain Reflexes™, how much easier would it be to treat the more common patients in much less pain that we see every day?)

Dr. Walsh is Board Certified in 4 medical specialties- he's worth listening to. He works in a hospital setting and sees very ill patients. He's been doing all the P.N.T. techniques in this setting for many years now.

***Disclaimer: Calculating generally expected performance results is difficult or impossible, because there is no "typical" user of our products. We've made a good faith effort to share the actual experiences of our doctors and their patients. Every practitioner (D.C., L.Ac,**

M.D., P.T.,N.D. and L.M.T.) is unique in terms of their background, training, and understanding. Each will apply the procedures in their own unique way. Every patient is also individual in how they will respond to treatment. Our general impression is that most doctors find the techniques easy to learn and apply from watching the DVDs, and easy on the doctor. Many of their patients with chronic and acute pain will show improvement from these techniques. Some patients do not respond at all. We're always eager to for our students to give us feedback on the results they're getting. P.N.T., the Brain Reflexes™, and the other techniques are not effective for every patient. Several treatments are usually needed for lasting results. These reports were all written by the doctors themselves; they have not been verified by us, and may not reflect Dr. Kaufman's opinion. These are our best testimonials and may not be typical. Your results will vary. These doctors were treated with P.N.T. or other Kaufman Techniques™.
